# Installing Apple's App Store applications using Self Service
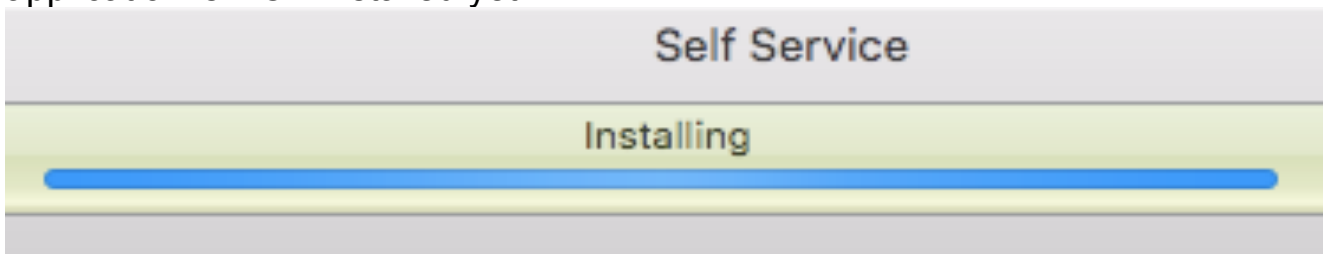

Open Self Service from your Applications folder.

Click on the Software category in the right pane.

Select the application that you want to install and click Install next to it.

The "Installing" status bar at the top will complete quickly. However, the application is NOT installed yet.

Take a look at your Launchpad icon at the lower left area of your dock. That status bar will go away once the application completely installs and the Launchpad icon should bounce once.

After this, you will be able to open the application from your Applications folder.
